Summary

Forward-thinking problem solver with a strong intellectual curiosity and a passion for converting innovative ideas into reliable execution. Committed to a data-driven, customer-focused approach when tackling complex technical challenges. Thrives in highly collaborative environments and brings a 'never-settle' attitude to continuous improvement, precise analysis, and delivering tangible value.

Education

VIT-Bhopal University <i>B.Tech in Cyber Security & Digital Forensics</i>	CGPA: 8.42	2024-2028 <i>Bhopal, MP</i>
City Montessori School, LDA Campus <i>Intermediate (12th)</i>	Percentage: 91.5%	Completed 2023 <i>Lucknow, UP</i>
City Montessori School, LDA Campus <i>High School (10th)</i>	Percentage: 96.00%	Completed 2021 <i>Lucknow, UP</i>

Technical Skills

Languages: Java, Python, C++, HTML/CSS, JavaScript
Tools & Technologies: Git, GitHub/GitLab, Docker, MySQL, Postman, VS Code, IntelliJ IDEA
Platforms: Linux (Ubuntu, Kali), Windows, Oracle VirtualBox, Railway Cloud
Coursework & Concepts: Object-Oriented Programming, Operating Systems, Computer Networks, Data Structures & Algorithms

Projects

- Marks Dashboard** | *Python, FastAPI, WebSockets, MySQL, JavaScript* GitHub | March'26
- Customer-Facing Web Application:** Designed and deployed a web-enabled data collection platform on Railway cloud serving **200+ active users**, handling over **840 real-time requests** (peaking at 3.2K monthly) while maintaining constant uptime and response integrity.
 - Data-Driven Analytics Pipeline:** Engineered WebSocket-powered live dashboards with a MySQL backend, implementing relative grading algorithms (Bell Curve) and interactive scatter plots to deliver **data-driven insights** across **10+ classes** with automated 24-hour data lifecycle management.
- Kitchen Order Ticket (KOT) System** | *Java, Multithreading, JDBC, MySQL* GitHub | Jan'26
- Concurrent Java Service Architecture:** Designed a multithreaded restaurant order management system using a **Producer-Consumer threading model** with synchronized shared queues (wait()/notifyAll()) to safely process concurrent order streams without data corruption.
 - Data Persistence & Live Dashboard:** Integrated **JDBC with MySQL** to log all processed orders across 60 food items, providing an immutable read-only owner dashboard for real-time operational metrics and secure auditing.
- Distributed Monitoring Pipeline** | *Docker, Wazuh, Ubuntu, Kali Linux, Oracle VM* GitHub | June'26
- Multi-VM Systems Architecture:** Designed and deployed a **3-host virtualized network** using Oracle VirtualBox—configuring Ubuntu Server and Kali Linux nodes with custom networking to simulate distributed client-server communication and centralized log monitoring.
 - Containerized Service & Log Processing:** Deployed a Dockerized service with custom port-forwarding rules and authored **Wazuh decoder/rule XML templates** (Rules 100100–100103) to parse raw JSON log streams, achieving **100% data fidelity** for real-time event capture on a centralized dashboard.

Experience

- Health-O-Tech (Run-Riot '26) — Tech Team Member** April'26
- API Integration & Team Collaboration:** Coordinated with a multi-disciplinary tech team to integrate Strava APIs, defining race segments and onboarding **300+ participants** across a 2-day university-wide athletic event.
 - Automation & System Deployment:** Built automation tools using Mail Merge to process bulk participant communications, and deployed **Luma** for real-time registration verification—processing **100+ attendee check-ins at 10–20 seconds per participant**, eliminating manual gate delays.
- InLighnX Global Pvt Ltd (InLighn Tech) — Remote Intern** Aug'25 - Nov'25
- Developed Python-based network tools including a multi-threaded subdomain discovery engine using ThreadPoolExecutor and DNS reconnaissance scripts using dnspython, completing weekly technical modules across the program.

Certifications & Achievements

- Oracle Certified Professional (Java SE 21) — 82% | Foundations Associate — 85%** (2026): Validated proficiency in enterprise-grade Java development and core platform fundamentals.
- Google Cybersecurity Professional Certificate (2025) — 88% avg:** Completed 181-hour program covering network security, Python automation, and Linux administration.
- TryHackMe:** Ranked **top 2% of 8M+ users** globally; completed the full Cybersecurity101 learning path (2026).
- CTF Competitions:** Placed **top 5** across Bug Trek, HackSecure, and Cyber Carnival challenges (20+ competing teams each) at VIT-Bhopal University.
